CHARLEMAGNE.

A HISTORY OF CHARLES THE GREAT (CHARLE-

MAGNE). By J. I. Mombert, D. D. Svo., pp. xi-564. D. Appleton & Co. A very good test of the real worth of a great man whose career has been magnified by legendary accretions is to reduce the tradition as far as pos sible to its cimplest elements. Dr. Mombert, following the German scholars, has endeavored to do this in the case of Charles the Great, and it must be said that the hero stands it well. The process of reduction is not always agreeable to the spectator. Many romantic fables have to be given up; many picturesque fictions are condensed into prosaic facts. But when the work is finished there remains a noble and imposing figure, and a life the activities of which go far explain and to justify the popular mythology which has grown up over it. But the undertaking is a difficult one, for several reasons. The main dependence of every biographer of Charles the Great is the account of him by his contemporary and dependant, Eginhard. The latter, however, wrote in an uncritical ago, and at the Court of ouis the Debonaire, Charles's son, Greatly reverencing his dead lord, and at the same time desirous of pleasing his living patron, the biographer carefully glazed over all the discreditable points in Charles's career, and magnified the creditable ones. Thus the principal authority on his reign is vitiated by partiality. But this is not all. The triumphs of Charles, his territorial expansion, the methods he took to subdue his foes, are by Eginhard invariably represented as in some way forced upon the King, or as being in some way conducive to the glory or security of Christen-dom. Perhaps it was to be expected that a Frankish historian should put this color upon the KNITTING-CROCHET. acts of the Frankish sovereign, but it is none the less true that when an impartial modern is seeking the exact truth about the Carlovingtan period, he is seriously embarrassed by this kind indiscriminating culogy.
With the help of contemporary chronicles, how-

ever, it has been found possible to frame an outline sketch of the reign which may be accepted as approximating the truth. There will even then be plenty of dubious passages, regarding which the conscientious student can only suspend judgment and hold conflicting statements evenly balanced. But these are only incidental, and interfere in no way with the formation of a clear idea of what Charles the Great was and did. He certainly was, as Dr. Mombert says, the greatest man of the Middle Ages, and one of the greatest of whom history retains any record. Whether we regard him as soldier, statesman, lawmaker, student, theologian or administrator, we find him manifesting abilities of the first order. His military prowess alone would have made the reputation of an ordinary sovereign, for there was no captain of his time who could withstand him. His relation to the Papacy was peculiar. In effect he controlled both Hadrian and Leo, and he controlled them not secularly, but eccle-siastically, deciding knotty questions of theology and canon law, calling and manipulating councils, and acting generally, not as the vassal, but as the elder brother of the The master of nearly all the continental Europe of those days, he was indeed the most portentous figure the world then showed. The Emperor of the West was a reality, the Emperor of the East a mere fiction. Charles could make Popes if he chose; he could abolish or increase the temporal power of Rome; he was all-powerful, in short. But everywhere and in all things he was dominant. His socalled capitularies show that he was prepared to legislate upon the least details of government, social and religious life. He was a despot, but an intelligent one, and he reigned in an age when personal liberty was unknown. The methods by which he secured peace and enlarged his Empire are apt to strike a modern as ruthless. wars with the Saxons, the Lombards, the Avars, and other nations, were conducted after that "thorough" fashion which a thousand years ago was considered the right way of dealing with

enemies, and especially heathen enemies. Under the influence of the Anglo-Saxon 'Alcuin, Charles abated somewhat of his ferocity with the Saxons, and when mere forcible baptism failed to convert them at once into Christians and peaceful subjects he did not, as at first, incontinently deliver them over to the Dr. Mombert is horrified by the massacre of Verdan, where the King caused nearly five thousand Saxons to be butchered in one day. No doubt it was a bloody deed, but if all similar acts are to be dealt with in the same way there will be an end of Charlemagne's glory, for all his wars upon less civilized peoples were conducted on the principle of desolation and extermination. He literally destroyed the Avars thus, and crushed the power of the Saxons by the same fierce and pitiless methods. Of course it was all very cruel, and it is equally clear that the only crime of the so-called "rebels" was attempting to defend and recover their freedom. But that most Christian Prince Louis the Fourteenth ravaged the Palatinate six cen turies later in quite as savage a manner, and within the century so-called civilized nations have, by their armies, committed atrocities in the sack of captured cities such as the Paladins and menat-arms of Charlemagne certainly could not have exceeded. Even the much-condemned massacre of Verdan must sink into insignificance beside the butchery at Magdeburg, where thirty thousand souls, men, women and children, perished Wellington's troops during the Peninsular War did some awful things, and as to the French during the Terror, nothing in the ninth century can parallel the horrors per-Then, too, it must be remembered that the Saxons, the Avars, the Abodrites, and hise other tribes attacked and subdued by Charles were the most intolerable of neighbors. They could not be deterred from raiding over the borders, and when they went on a raid they were as pitiless as Apaches. The only way to keep them quiet was to disable them for mischief, and Charles knew this and acted upon it. He expended much blood and treasure upon

his wars, but when their object was accomplished he had welded together a magnificent Empire, which he proceeded to govern with an enlightenment far in advance of the time. He believed in the humanizing effect of letters and art, and encouraged learning and prowided for the diffusion of education. Dr. Mompert's description of the Palatine school, taken from original documents, affords a vivid glimpse of Charles's methods and ideas. Indeed, the knowledge we possess of this monarch's personal habits, mode of living, speech, physical appearance and external aspect generally, is remarkably full and detailed; so much so that if the chronicles of his deeds were more trustworthy we should know more about him than about many historical characters much nearer to us in time. The practical and systematic ways of the Emperor are curiously and interestingly shown in the account of his personal arrangements, the government and supply of the royal villas, and the provision made for what was doubtless the most luxurious household in the country of the Franks, though as compared with the Italian modes of life, exceedingly frugal

Though terrible to his enemies Charles the Great was clement and charming among his friends. There can be no doubt that he inspired strong personal affection; that he was what would be called to-day a magnetic man, and that his tendencies were on the whole and in the long run decidedly in the direction of beneficent government. His capitularies gave the law to a great part of Europe for centuries, and may be said to have been the foundations of government by legislation instead of force. His counsel as expressed in his letters is always elevated and often stamped with nobility of spirit Notwithstanding many inconsistencies and backslidings, Charles was naturally a religious man. He was deeply impressed with the responsibilities attaching to his position as the defender of Christianity, and he

forced the observance of that faith upon the Pagans whom he conquered in undoubting confidence as to the efficacy of his methods and the duty he was fulfilling to the Church. Dr. Mombert's work, in carefully excluding the legendary elements, justifies a high estimate of Charlemagne's real powers and abilities, and shows that the seemingly extravagant view of him taken by his immediate successors was better grounded than is often the case. A fair illustration of the author's method in dealing with partly mythical, partly historical matters, may be found in his treatment of the Roland legend. He concludes that this rests upon facts. The rearguard of Charles's army, in returning from Spain, was ambushed in the Valley of Roncevalles by the Basques, who did destroy that body of troops, together with Roland and many other noted men. He thinks it credible that the Moors may have had a hand in the stratagem, though there is no proof of this beyond the legend, and that omits all mention of the Basques, who undoubtedly took the principal part in the slaughter. Those who wish to follow the Carlovingian Cycle, however, must refer to other works, of which there are an abundance. Dr. Mombert writes only of the historic Charles the Great, and of that redoubtable prince he has succeeded in making a most interesting and valuable study.
